

Python-Viptela SDK

Steven Carter, Principal Architect
@stevenmcarter

#CiscoLive | #DevNetDay

What is the Python-Viptela SDK?

- <https://github.com/ciscocodevnet/python-viptela>
- A DevNet Community project made up of:
 - Cisco Public Sector Development Community
 - Cisco CX
 - Cisco Sales
 - Cisco Partners (e.g. World Wide Technologies)
 - Community participants

Capabilities

- Easier way to access the API via Python, CLI, Ansible
- Supports multitenancy
- Idempotency (in most cases)
- Do no harm
- Full lifecycle of vManage control plane and edges
- Full lifecycle of templates and policy
- DevOps, CI/CD

API Structure

- API – Methods directly related to the API
- Data – Methods that convert/transform the data from the API
e.g. Convert object IDs to object names
- Utilities – Utilities that
e.g. Convert list to dictionary
- Apps – Function specific methods
e.g. Export/Import templates to/from file

Demonstration Use Cases

- Simple Device List, OMP Route List
- Export Templates
- Using Python, CLI, and Ansible

Other Use Cases

- Backup, detect drift
- Dynamically Adding/Changing Policy
- Testing Changes/Upgrades
- Provisioning/Bootstrapping Edges
- CI/CD

Try it out!

Go to the DevNet Cisco SD-WAN Sandbox and try the examples:

<https://github.com/cisco/devnet/python-viptela>

Get more ideas from our Cisco SD-WAN CI/CD pipeline:

<https://github.com/cisco/devnet/sdwan-devops>

Thank you
