

Container-based Applications

In Nexus 9000 switches

Tim Miller, DC Technical Solutions Architect, GVE
@broadcaststorm
DEVNET-DC

Agenda

- What problem are we trying to solve?
- Nexus 9000/Open NX-OS Architecture
- Examples Use Cases
- Conclusion

What's the Problem?

Solve Operational Challenges with Agility

Automation

- Config Mgmt Agents

- Distributed Processing

- Localized collection in remote DC

Monitoring

- Prometheus
- Telegraf

- Custom Scripting/Container

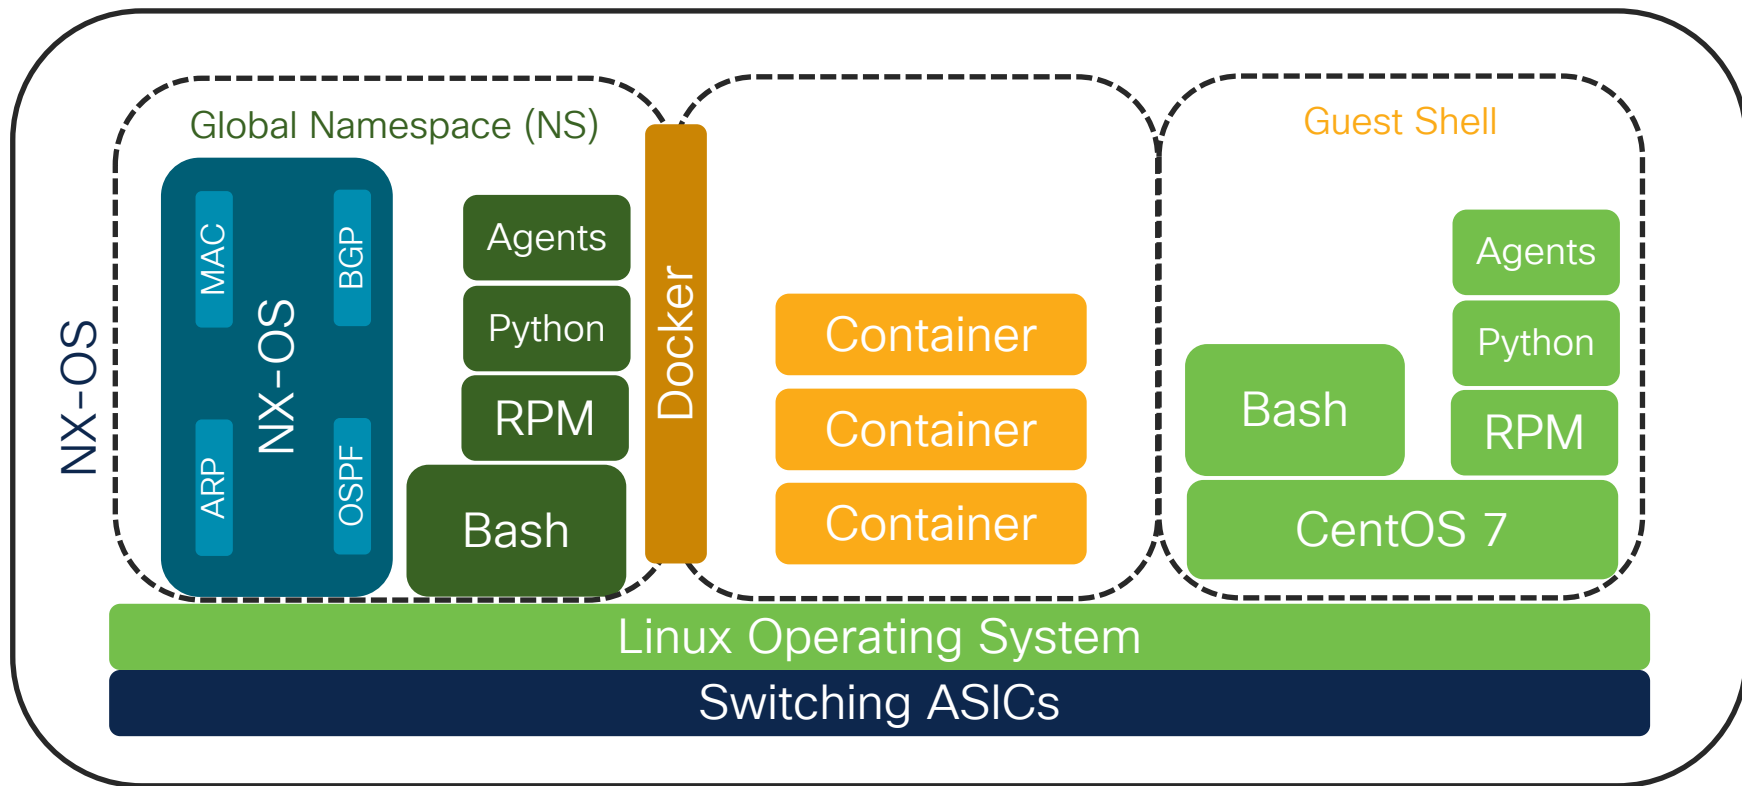

- API based, customized metrics

- Or, whatever!

- Leverage external registries

Open NX-OS Architecture

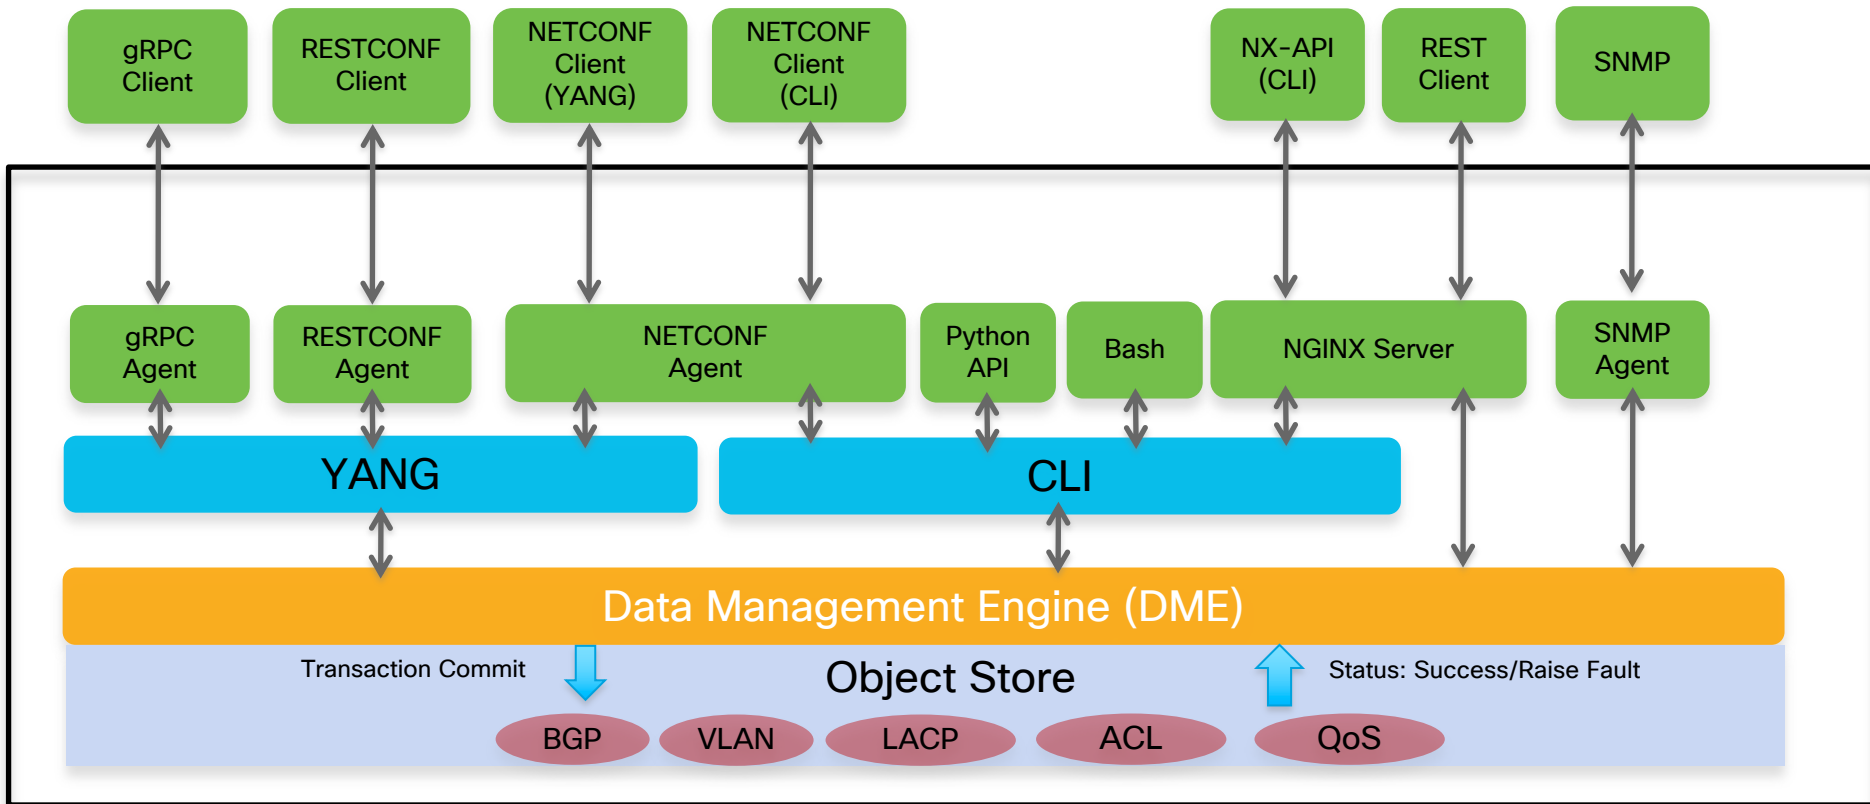

Open NX-OS Architecture

Docker Networking and Security on NX-OS

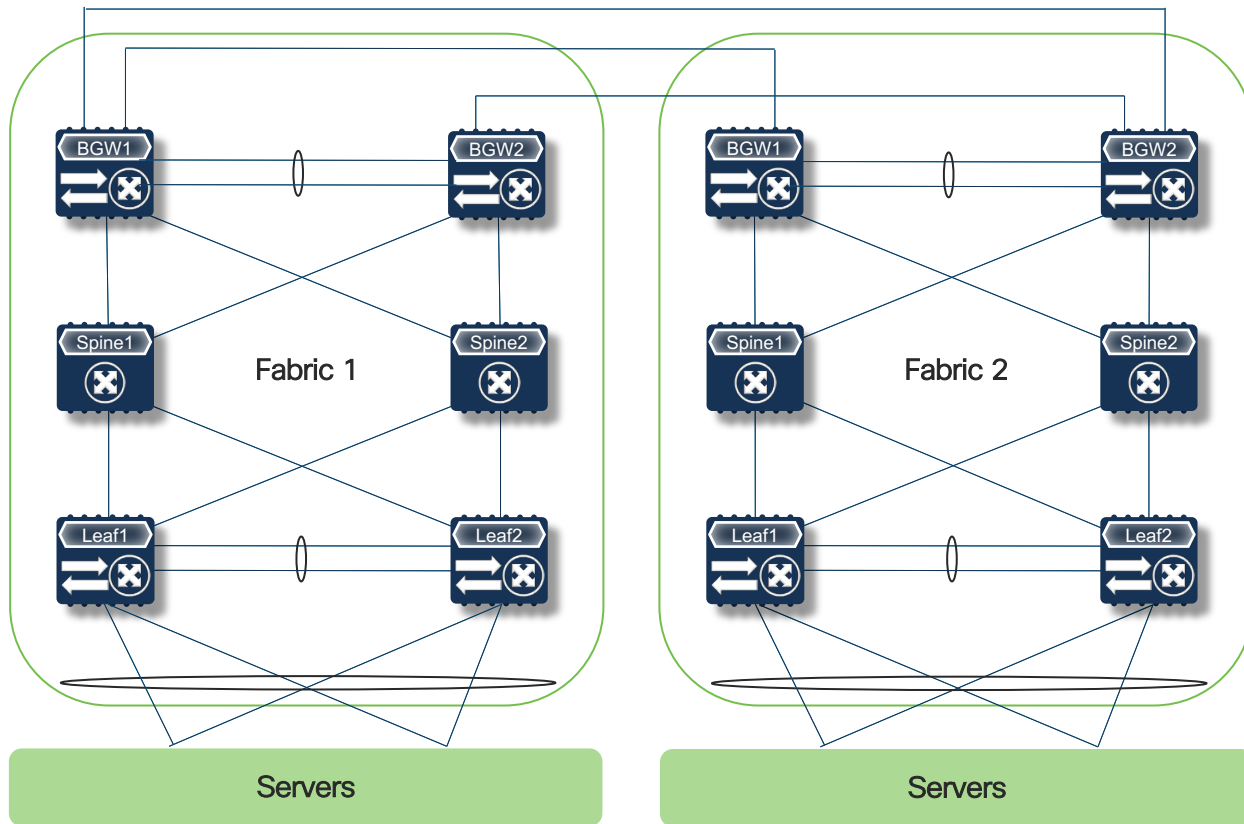

Open NX-OS Programmability Interfaces

Example Use Cases

Demo Network – DCNM VXLAN EVPN Multisite

Summary

Resources for this Talk

- Code for this Talk
 - <https://github.com/CiscoSE/DevNet-DC-Containers-on-NXOS-CLUS20>
- DevNet Sandbox
 - <https://developer.cisco.com/docs/sandbox/#!/data-center/featured-sandboxes>
 - Requires setup as default network configs are not VXLAN EVPN based
- [DevNet Learning Tracks](#)
 - Containers, NX-OS Programmability
