June 2-3, 2020 | ciscolive.com/us

#CiscoLive

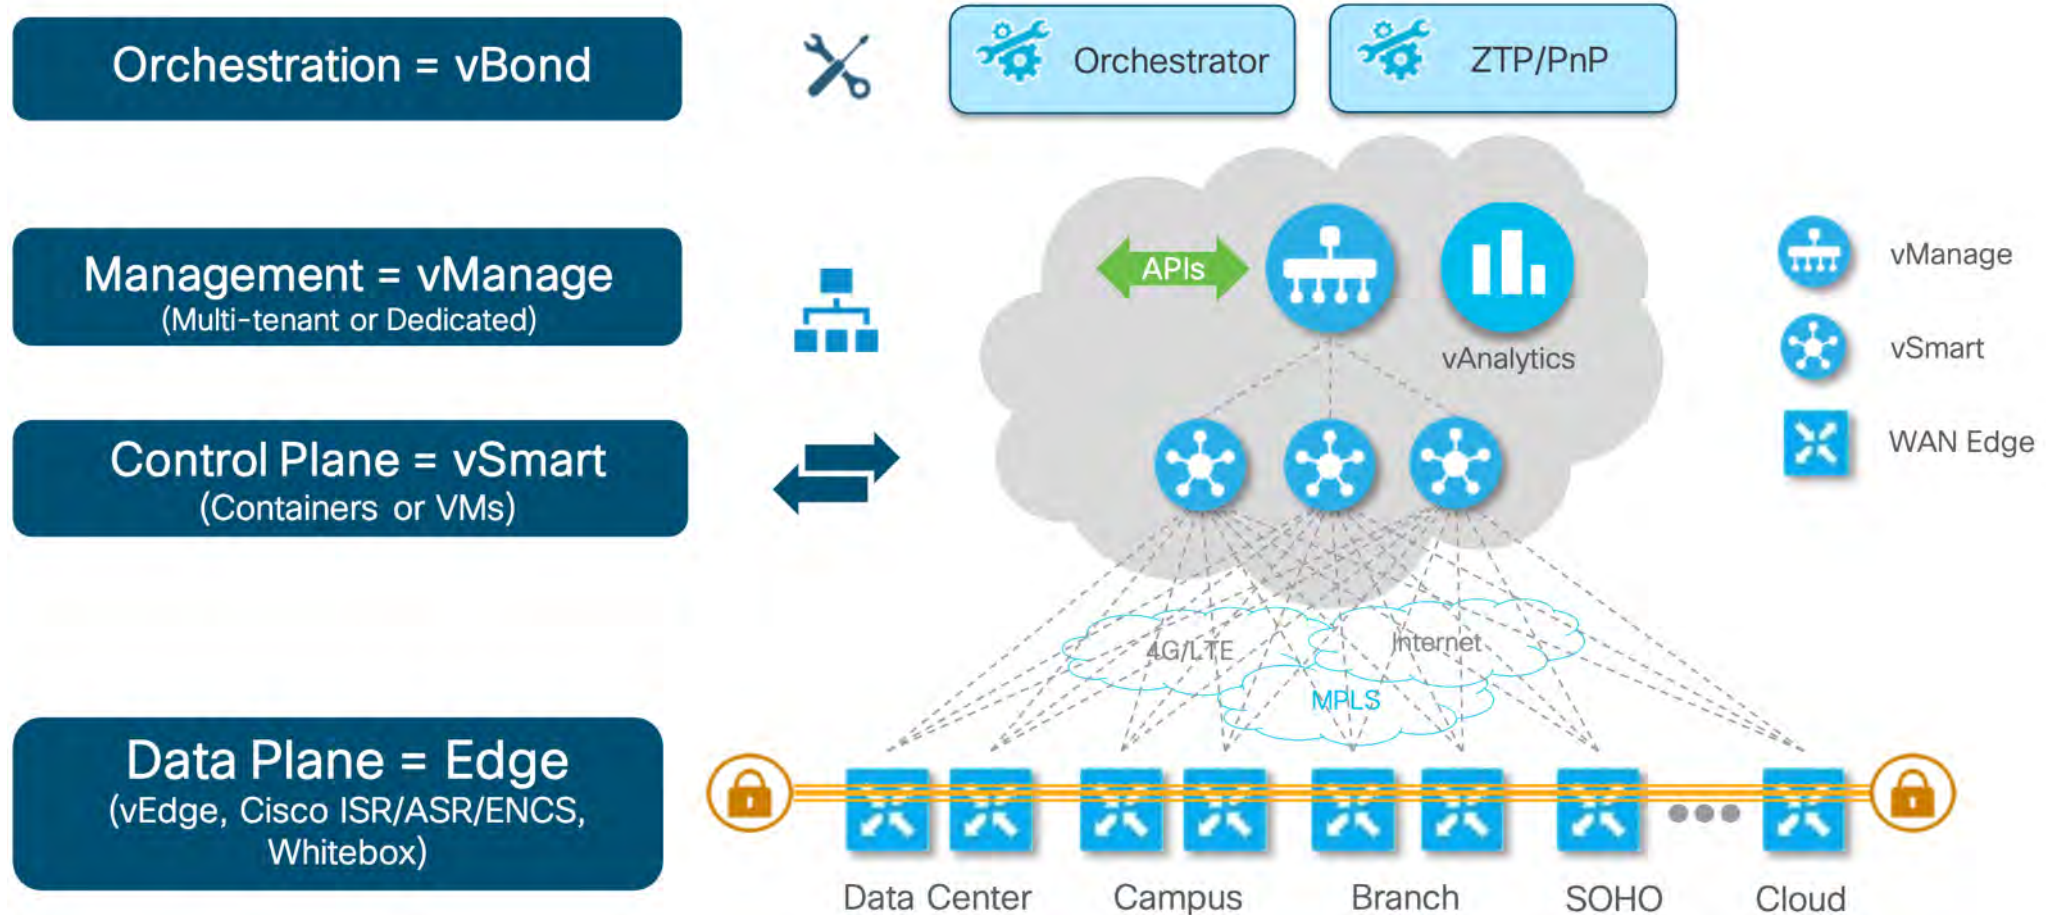

Agenda

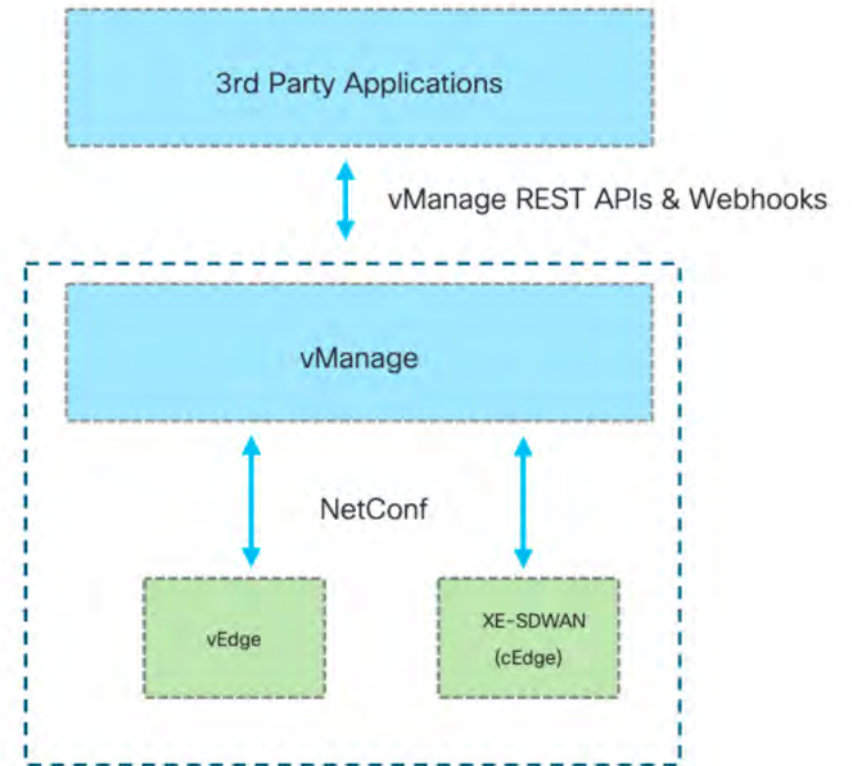

- What is Cisco SD-WAN?
- vManage REST APIs
- Consuming vManage APIs
- The URI Structure
- Cisco DevNet SD-WAN Sandbox
- Let's get coding aka 'Demo'

Cisco SD-WAN Architecture

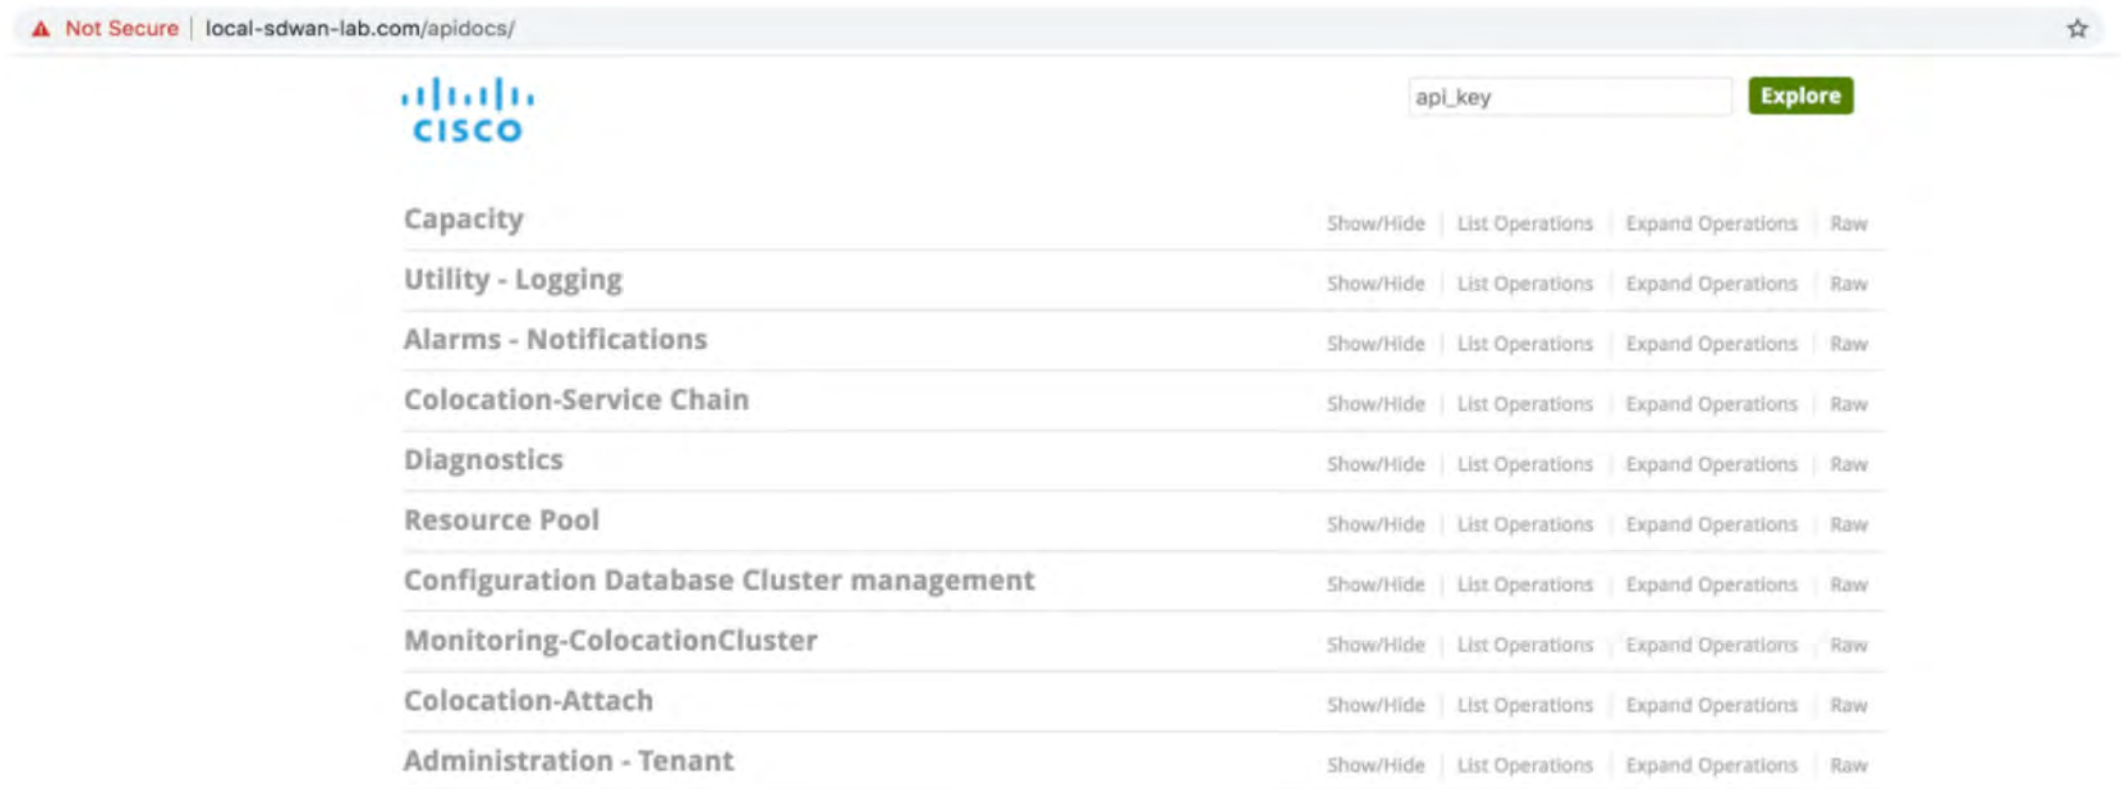

vManage REST APIs

- vManage uses REST architecture which is stateless, client-server cacheable communication protocol
- vManage exposes REST APIs and webhooks to integrated with 3rd party systems
- vManage uses NetConf for configuring and managing edge devices

vManage – Using REST APIs

API documentation built in – <https://<vmanage-ip:port>/apidocs>
Test API calls can be tried within the swagger UI

SD-WAN URI Structure

http:// or https://

- Protocol over which data is sent between client and server

Server or Host

- Resolves to the IP and port to which to connect

Resource

- The location of the data or object of interest

Parameters

- Details to scope, filter, or clarify a request. Often optional.

Let's get coding aka
'Python Demo'

Cisco DevNet SD-WAN Sandbox
