A Request-driven World

A Request-driven World

A Request-driven World

- Expensive
- Polling interval balance
- Information frequently not of value
- Remote resource contention

A Request-driven World

- Resources only consumed when necessary
- Can take instant action

An Event-driven World

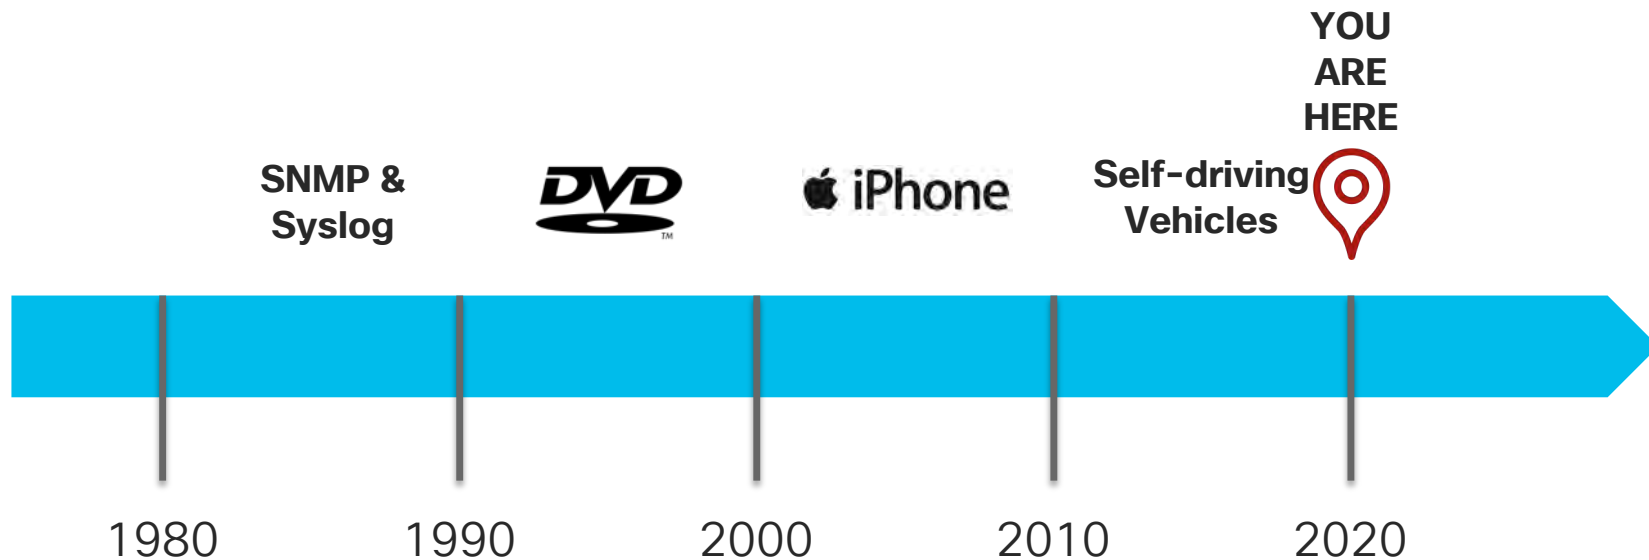

- Resources only consumed when necessary
- Can take instant action

Food is ready!

I'm on it!

An Event-driven World

Webhooks Building Blocks

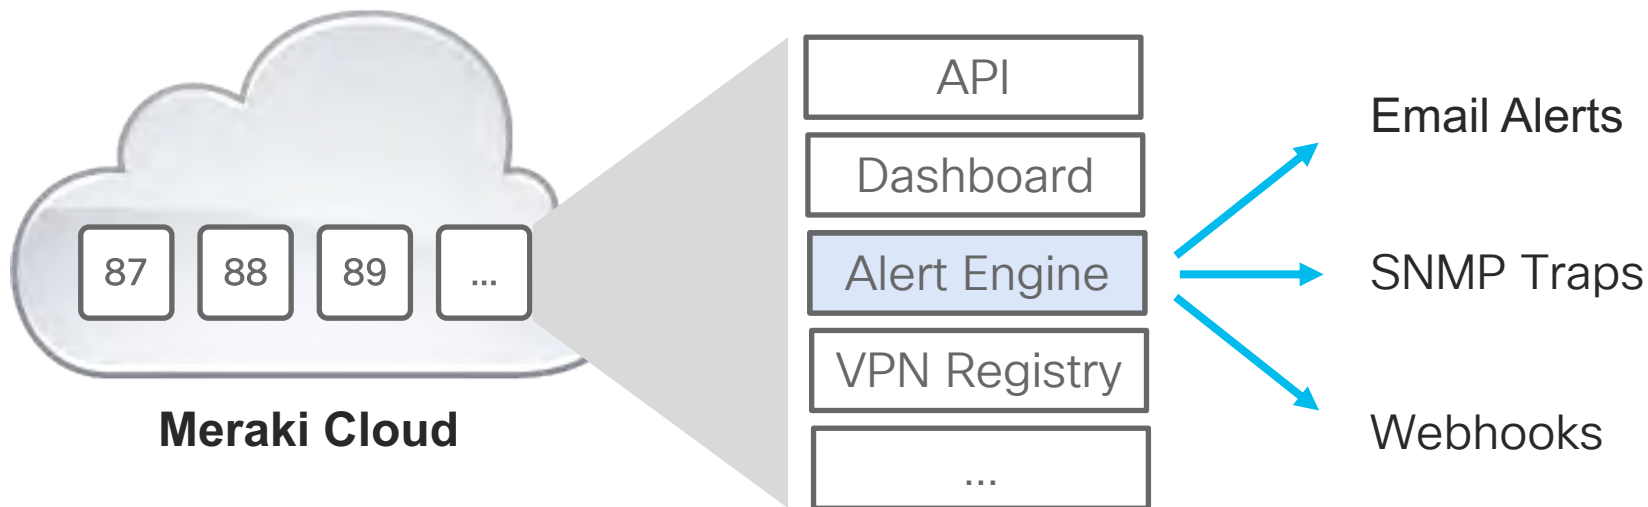

Webhooks Building Blocks

“You merely adopted the cloud. I was born in it, molded by it.”

--Miles Meraki, The Cloud-Managed Infrastructure Rises

Summary

Webhooks Summary

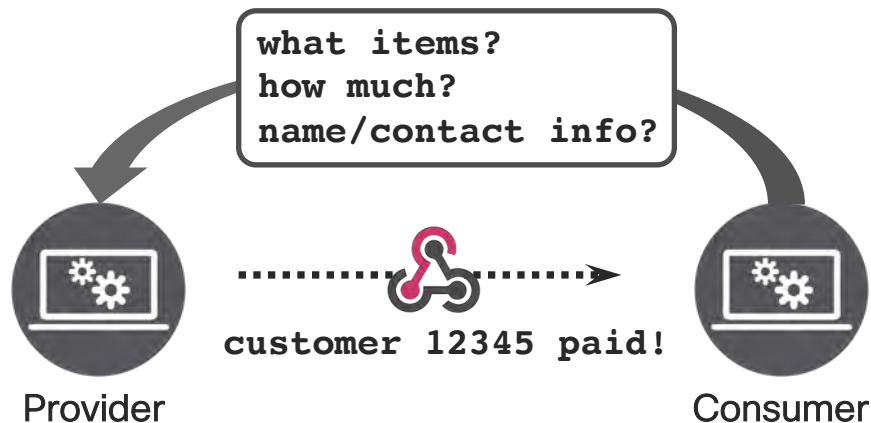

- Event-driven / real-time
- Encrypted - TLS
- Authenticated - secret
- Reliably-transported & lightweight - HTTP
- Machine-friendly formatting - JSON

Best Practices

- Use HTTPS & secret, but consider IP whitelists or firewall rules

Best Practices

- Use HTTPS & secret, but consider IP whitelists or firewall rules
- Include as much relevant data as possible

Best Practices

- Use HTTPS & secret, but consider IP whitelists or firewall rules
- Include as much relevant data as possible
- Separate storing from processing

Best Practices

- Use HTTPS & secret, but consider IP whitelists or firewall rules
- Include as much relevant data as possible
- Separate storing from processing
- Correlate webhooks event with API endpoints

Best Practices

- Use HTTPS & secret, but consider IP whitelists or firewall rules
- Include as much relevant data as possible
- Separate storing from processing
- Correlate webhooks event with API endpoints
- Troubleshoot via triangulation

Thank you
